## 6.4 Pumping Screen

Ensure you always turn on the breast pump before inserting the pump in your bra.  
After successfully pairing the pump, it will automatically connect next time you turn it on.

**Single  
pumping  
screen**

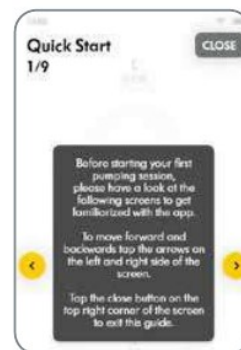

**Double  
pumping  
screen**

12

Before starting the first pumping session, the app will show a Quick Start guide to get familiarized with the app.

On the top of the screen you will see

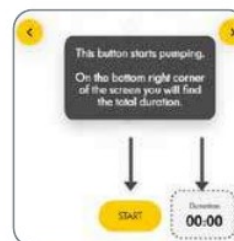

- the side selected (L or R)
- the battery status in percentage

At the bottom of the screen you can tap the yellow START button to start pumping. When double pumping, pressing the START button will start both pumps simultaneously.

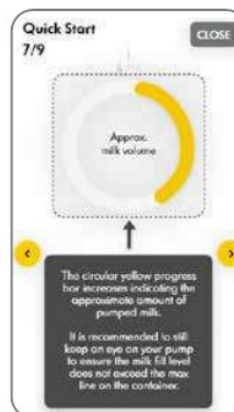

The START button turns into the FINISH button once you start pumping.

On the bottom right corner of the screen you will find the total duration.

The circular yellow progress bar increases indicating the approximate amount of pumped milk.

It is recommended to still keep an eye on your pump to ensure the milk fill level does not exceed the max line on the container.

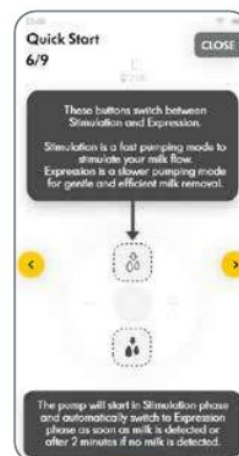

13

Below the circle you can see the current phase of each pump: Stimulation or Expression.

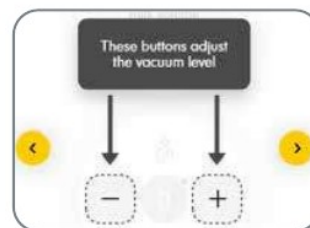

### i Information

- **Stimulation phase** is a fast pumping mode to stimulate your milk flow.
- **Expression phase** is a slower pumping mode for gentle and efficient milk extraction.
- **Maximum Comfort Vacuum (MCV)** is the highest vacuum setting where pumping still feels comfortable. This is different for every mother. To find your MCV increase the vacuum level by tapping the + button until pumping feels slightly uncomfortable (not painful), then decrease the vacuum slightly with one tap of the - button.

The pump starts in Stimulation phase and automatically switches to Expression phase as soon as milk is detected or after 2 minutes if no milk is detected. You can switch the phase by tapping the icons shown to the right.

In this screen you can also find the vacuum level controls as well as the current vacuum level. When the vacuum is already adjusted to the maximum level, the + button will be greyed out; conversely, when the vacuum is adjusted to the minimum level, the - button will be greyed out.

 The heart icon next to the vacuum level indicates the last stored Maximum Comfort Vacuum (MCV) level. The pump stores the Maximum Comfort Vacuum (MCV) level, and will automatically adjust to this level during your next pumping session. Please refer to the Instructions for Use of your Magic InBra breast pump for more information.

14

You can pause the session anytime by tapping the PAUSE (||) button. To resume pumping tap the START (▶) button.

#### Information

- If you move away from your smartphone and/or the Bluetooth connection is lost during a pumping session, the app might lose the connection to your pump(s). The app will notify you of the disconnection but the breast pump will continue to operate.
- When you return close to the smartphone and/or the Bluetooth connection is restored, the app will automatically reconnect.

To pair a new pump, access app settings, or find additional help, tap "MORE" at the bottom of the screen.

## 6.5 Controlling the pump lights

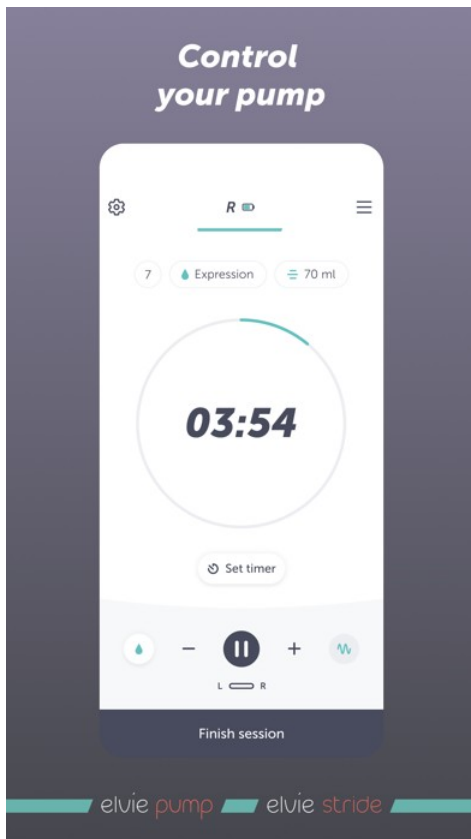

Tap the lamp icon on the upper right corner to turn the pump interface lights on and off.

### Pump lights on

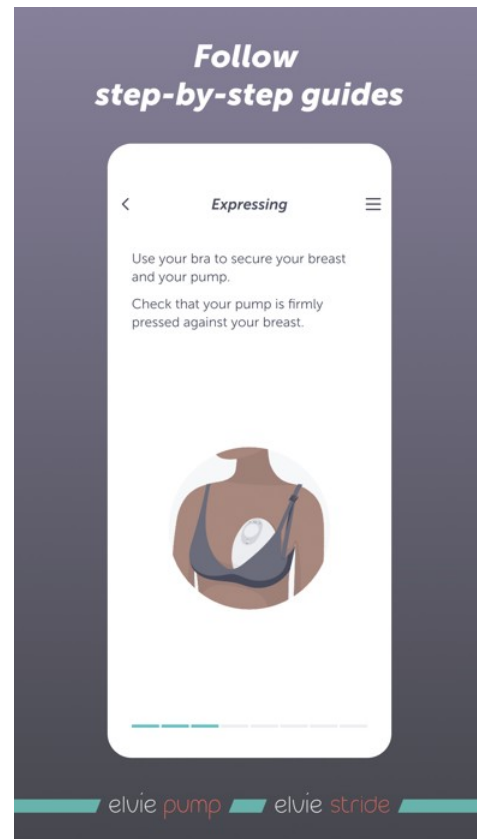

### Pump lights off
